

AI RESOURCES

The goal of the [Building Capacity for Generative AI in K-12 Education Project](#) is to support school districts—especially small and under-resourced ones—in assessing their readiness to implement Gen AI technologies and developing a roadmap for implementation that aligns with instructional and operational objectives, via a scalable Train-the-Trainer Model for affiliated ESAs and SEAs.

The [K-12 Generative AI Readiness Checklist](#) was designed to guide K-12 school districts in understanding key factors to consider before implementing Gen AI technologies. The [K-12 Gen AI Maturity Tool](#) is more comprehensive, and allows districts to self-evaluate their maturity level across the major domains of Leadership, Operational, Data, Technical, Security, and Legal/Risk, and to identify and plan for the next level of maturity.

The [2024 Blaschke Report](#) explores the transformative potential of AI to enhance educational accessibility and support for students, particularly those with disabilities. As AI technologies and assistive tools become increasingly prevalent in educational settings, it is crucial to understand both their benefits and limitations.
